## **AMENDMENTS TO THE CLAIMS:**

This listing of claims will replace all prior versions, and listings, of claims in this application:

## **LISTING OF CLAIMS:**

Claims 1 to 16. (Cancelled).

17. (Currently Amended) The layer system as recited in Claim [[16]] <u>24</u>, wherein the organic compound contains a halogen.

Claim 18. (Cancelled).

19. (Previously Presented) A layer system, comprising: an etched layer, whereby the etched layer is a silicon layer; and a passivation layer applied at least regionally to a surface of the silicon layer, wherein:

the passivation layer includes a first, at least largely, inorganic partial layer and a second partial layer, and

the second partial layer is made of an organic compound, wherein the organic compound has the general formula  $R_a$ - $R_b$ - $Si(X)_{3-n}$ - $(R_c)_n$ ,  $R_a$  being a perfluorinated polyether or a perfluorinated alkyl group having 1 to 16 carbon atoms, especially 6 to 12 carbon atoms,  $R_b$  and  $R_c$  being an alkyl group, and X being a halogen, an acetoxy group or an alkoxyl group, and n having a value of 0 to 2.

- 20. (Currently Amended) The layer system as recited in Claim [[16]] 24, wherein the first partial layer is at least largely composed of an oxide layer having a silicon oxide.
- 21. (Currently Amended) The layer system as recited in Claim [[16]] <u>24</u>, wherein the first partial layer has a thickness of 1 nm to 100 nm.

NY01 1998346 2

- 22. (Currently Amended) The layer system as recited in Claim [[16]] <u>24</u>, wherein the first partial layer has a thickness of 1 nm to 20 nm.
- 23. (Currently Amended) The layer system as recited in Claim [[16]] <u>24</u>, wherein the first partial layer is directly applied one of (a) to the silicon layer and (b) on a layer of silicon oxide situated on the silicon layer.
- 24. (Previously Presented) [[The]] A layer system as recited in one Claim 16, wherein comprising:

an etched layer, whereby the etched layer is a silicon layer; and
a passivation layer applied at least regionally to a surface of the silicon layer,
wherein:

the passivation layer includes a first, at least largely, inorganic partial layer and a second partial layer,

the second partial layer is made of an organic compound, wherein the organic compound includes a silane corresponding to one of an organic fluorine silane, an organic fluorochlorine silane, and a siloxane, and the second partial layer is a self-assembled monolayer.

- 25. (Currently Amended) The layer system as recited in Claim [[16]] 24, wherein the second partial layer has a thickness of 0.5 nm to 30 nm.
- 26. (Currently Amended) The layer system as recited in Claim [[16]] <u>24</u>, wherein the second partial layer has a thickness of 5 nm to 20 nm.
- 27. (Currently Amended) The layer system as recited in Claim [[16]] <u>24</u>, wherein the passivation layer protects the silicon layer with respect to an etch attack by a gaseous halogen fluoride including one of ClF<sub>3</sub> and BrF<sub>3</sub>.
- 28. (Currently Amended) The layer system as recited in Claim [[16]]  $\underline{24}$ , wherein the passivation layer is free of micro-scale or nano-scale channels which are permeable for a gas including one of  $ClF_3$ ,  $BrF_3$  and a vapor.

Claims 29 to 32. (Cancelled).
